Commonist Red Art: Blood, Bones, Utopia and Kittens

Does Red Art exist? And if so, who creates it and where can we find it? This special issue of the Leonardo Electronic Almanac addresses these questions and collates a series of perspectives and visual essays that analyze the role, if any, that Red Art plays in the contemporary art world.

Red Art, these are two simple words that can generate complex discussions and verbal feuds since they align the artist to a vision of the world that is ‘Red’ or ‘Communist.’

Nevertheless, even if the two little words when placed together are controversial and filled with animus, they are necessary, if not indispensable, to understand contemporary aesthetic issues that are affecting art and how art operates in the context of social versus political power relations within an increasingly technological and socially-mediated world.

Red Art could be translated – within the contemporary hierarchical structures – as the art of the powerless versus the art of the powerful, as the art of the masses versus the art of the few, as the art of the young versus the old, as the art of the technological democrats versus the technological conservatives, as the art of the poor versus the art of the rich. Or it could be described as the art of the revolution versus the status quo. In the multitude of the various possible definitions, one appears to stand out for contemporary art and it is the definition of art as bottom-up participation versus art as top-down prepackaged aesthetic knowledge. And yet, what does Red Art stand for and can it be only restricted to Commonist Art?

The contemporary meaning of Red Art is different from what it may have been for example in Italy in the 1970s, since so much has changed in terms of politics, ideology and technology. It is no longer possible to directly identify Red Art with Communist Art (as the art of the ex Union of Soviet Socialist Republics or of its satellite states and globalized Communist political parties which were and continue to be present in the West – albeit in educated forms) nor as the art of the left, but there is a need to analyze the complexity of the diversification and otherization of multiple geopolitical perspectives.

If today’s Red Art has to redefine its structures and constructs it becomes necessary to understand who is encompassed within the label of Red Artists and what their common characteristics are. Red Artists – if we wanted to use this category – and their aesthetic production cannot be reduced to the word ‘Communist,’ borrowing passé ideological constructs. An alternative to the impasse and the ideological collapse of communism is the redefinition of Red Art as the art of the commons: Commonist Art. If Red Art were to be defined as the art of the commons, Commonist Art, thereby entrenching it clearly within technoutopias and neoliberalist crowd sourcing approaches for collective participation, this would provide a contradictory but functional framework for the realization of common practices, socially engaged frameworks, short term goals and ‘loose/open’ commitments that could be defined in technological terms as liquid digital utopias or as a new form of permanent dystopia.

The XXIst century appears to be presenting us, then, with the entrenched digitalized construct of the common versus the idea of the Paris Commune of 1871, thereby offering a new interpretation of the social space and an alternative to traditional leftist/neoliberal constructs. The idea of the common – as an open access revolving door, is opposed to the concept of the commune – as a highly regulated and hierarchical structure.

The ‘semantic’ distinguo between commons and communes becomes important since both terms are reflections of constructions and terminological frameworks for an understanding of both society and art that is based on ‘likes,’ actions and commitments for a common or a commune. The commitment, even when disparagingly used to define some of the participants as click-activists and armchair revolutionaries, is partial and leaves the subject able to express other likes often in contradiction with one another: e.g. I like the protests against Berlusconi’s government and I like the programs on his private TV.

I find the idea of the commons (knowledge, art, creativity, health and education) liberating, empowering and revolutionary, if only it was not expressed within its own economic corporate structures, creating further layers of contradiction and operational complexities.

The contradictions of contemporary Red Art and contemporary social interactions may be located in the difference between the interpretations of common and commune – the commune upon which the Italian Communist Party, for example, based its foundations in order to build a new ‘church.’

The relationships in the commune of the Italian communists (oxymoronically defined Cattocomunisti or Catholic-communist) rests in faith and in compelled actions, in beliefs so rooted that are as blinding as blocking the light of God in the painting The Conversion of Saint Paul on the Road to Damascus by Michelangelo Merisi da Caravaggio.

[...] and from the leadership an aggressive unwillingness to allow any diversion or deviation. ‘That time produced one of the sharpest mental frosts I can remember on the Left,’ the historian E. P. Thompson would recall from personal knowledge of the CP.

It is this blind faith that has generated the martyrs of communism and heretical intellectuals, accusations from which not even Antonio Gramsci was able to escape. The vertical hierarchical structure of the commune and of the Communist Party produced heretics and imulations, but also supported artists, intellectuals, academics and writers that operated consonantly with the party’s ideals: people that sang from the same preapproved institutional hymn sheet.

Stefania: This young generation horrifies me. Having been kept for years by this state, as soon as they discover to have two neurons they pack and go to study, to work in the US and London, without giving a damn for who supported them. Oh well, they do not have any civic vocation. When I was young at the occupied faculty of literature, I oozed civic vocation. [...] I have written eleven novels on civic duty and the book on the official history of the Party.

Jep Gambardella: How many certainties you have, Stefania. I do not know if I envy you or feel a sensation of disgust. [...] Nobody remembers your civic vocation during your University years. Many instead...
To the question, then, if Red Art exists I would have to answer: YES! I have seen Red Art in Italy (as well as abroad), as the Communist Art produced in the name of the party, with party money and for party propaganda, not at all different from the same art produced in the name of right-wing parties with state or corporate money – having both adopted and co-opted the same systems and frameworks of malfeasance shared with sycophantic artists and intellectuals.

In order to understand the misery of this kind of Red Art one would have to look at the Italian aestheticisation of failure – which successfully celebrates failure in the Great Beauty by Paolo Sorrentino when the character of Stefania, and her ‘oozing civic duty,’ is ripped apart. It is a civic responsibility that is deprived and devoid of any ethics and morals.

This is but one of the multiple meanings of the concept of Red Art – the definition of Red Art as Communist Art, is the one that can only lead to sterile definitions and autocelebratory constructs based on the ‘aesthetic obfuscation of the lack of meaning’ as a tool for the obscurity of the aesthetic to act as a producer of meaning when the artist producing it is inept at creating meaning. Even more tragically, Red Art leads to the molding of the artist as spokesperson of the party and to the reduction of the artwork, whenever successful, to advertising and propaganda.

Commonist Art, founded on the whim of the ‘like’ and ‘trend,’ on the common that springs from the aggregation around an image, a phrase, a meme or a video, is able to construct something different, a convergence of opinions and actions that can be counted and weighed and that cannot be taken for granted. Could this be a Gramscian utopia of re-construction and re-fashioning of aesthetics according to ‘lower commons’ instead of high and rich ‘exclusivity,’ which as such is unattainable and can only be celebrated through diamond skulls and gold toilets?

Commonist Art – the art that emerges from a common – is a celebration of a personal judgment, partially knowledgeable and mostly instinctive, perhaps manipulated – since every ‘other’ opinion is either manipulated by the media or the result of international lobby’s conspiracies or it can be no more than a reinforcement of the society of the simulacra. Conversely, it may also be that the image and its dissemination online is the representation of a personal difference towards systems of hierarchical power and endorsement that can only support ‘their own images and meanings’ in opposition to images that are consumed and exhausted through infinite possibilities of interpretation and re-dissemination.

If Commonist Art offers the most populist minimum common denominator in an evolutionary framework determined by whims, it is not at all different from the minimum common denominator of inspirational/aspirational codified aesthetics that are defined by the higher echelons of contemporary oligarchies that have increasingly blurred the boundaries of financial and aesthetic realms.

Commonist Art – if the current trends of protest will continue to affirm themselves even more strongly – will continue to defy power and will increasingly seek within global trends and its own common base viable operational structures that hierarchies will have to recognize, at one point or the other, by subsuming Commonist Art within pre-approved structures.

Red Art, therefore, if intended as Commonist Art becomes the sign of public revolts, in the physical squares or on the Internet. It is art that emerges without institutional ‘approval’ and in some cases in spite of institutional obstacles. Gramsci would perhaps say that Commonist Art is a redefinition of symbolic culture, folk art and traditional m.masteries that processed and blended through digital media and disseminated via the Internet enable Red Art to build up its own languages and its own aesthetics without having to be institutionally re-processed and receive hierarchical stamps of approval.

Red Art can also be the expression of people whose blood and tears – literally – mark the post-democracies of the first part of the XXIst century. Non-political, non-party, non-believers the crowds of the Internet rally around an argument, a sense of justice, a feeling of the future not dominated by carcinogetic politicians, intellectuals and curators, that present themselves every time, according to geographical and cultural spaces, as Sultans, Envoys of God, or even Gods.

Red Art, the Commonist Art that perhaps is worth considering as art, is the one that is self-elected, built on the blood and bones of people still fighting in the XXIst century for justice, freedom and for a piece of bread. Art that rallies crowds’ likes and dislikes based on the whims of a liquid Internet structure where people support within their timelines an idea, a utopia, a dream or the image of a kitten.

This piece of writing and this whole volume is dedicated to the victims of the economic and political violence since the beginning of the Great Recession and to my father; and to the hope, hard to die off, that some utopia may still be possible.
Changing the Game: Towards an ‘Internet of Praxis’

There is a new spectre haunting the art world. Not surprisingly, it has been put forward in recent articles, panel discussions and books as the ‘ism’ that could, possibly, best describe the current dispositions of contemporary art. The name of the spectre is “post-internet art”. Unlike, however, its counterpart that was released in the world by Karl Marx and Friedrich Engels in 1848, this contemporary spectre has not arrived in order to axiomatically change the established order of things; conceivably, it has arrived in order to support it.

Post-internet art refers to the aesthetic qualities defining today’s artistic production, which is often influenced by, mimics, or fully adopts elements of the Internet. At the same time, the term incorporates the communication tools and platforms through which contemporary artworks reach their intended (or non-intended) audiences. Notably, in his book Post Internet (2011), art writer Gene McHugh suggests that regardless of an artist’s intentions, all artworks now find a space on the World Wide Web and, as a result, “[…] contemporary art, as a category, was/is forced, against its will, to deal with this new distribution context or at least acknowledge it.” Quite naturally, this would seem like a strong oppositional force directed against the modus operandi of the mainstream art world. Yet, further down in the same page, McHugh characterizes this acknowledgement as a constituent part of the “Post-internet art runs the danger of aestheticizing (or over-aestheticizing) a context that goes well beyond the borders of art: in the same way that we could talk about post-internet art, we could also talk about post-internet commerce, post-internet dating, post-internet travel, post-internet journalism, etc. Therefore, the role and the identity of the post-internet artist are not independent of a much wider set of conditions. This false notion of autonomy is quite easy to recognize if we think, for instance, of ‘post-radio art’ or ‘post-television art’ or, even, ‘post-videogames art’; and the inherent structural and conceptual limitations of such approaches.

Most importantly, however, any kind of aestheticization may readily become a very effective tool of politicalization. The idea of distributing images, sounds and words that merely form part of a pre-existing system of power, inescapably eradicates the political significance of distribution. The subversive potentiality inherent in the characterisation of a network as ‘distributed’ was systematically undermined over the 1990s and the 2000s, due to the ideological perva-
siveness of neoliberalism during the same period. Distribution – not to mention, equal distribution – could have enjoyed a much more prominent role as a natural fundament of the Web and, accordingly, as a contributory factor in any investigation of digital art. Last but definitely not least, one cannot ignore the crucial fact that apolitical art is much easier to enter the art market and play the ‘game’ of institutionalization (and vice versa).

To the question: could the Internet and new media at large become true ‘game changers’ in the current historical conjuncture? What does ‘red art’ have to propose, and how does it relate to the previously described ‘post-internet condition’?

Interestingly, the term “post-internet art” was born and grew parallel to the global economic crisis and the Great Recession of 2009. One the most important objectives of the social movements that were engendered by the crisis has been the effort to “ reclaim” and “re-appropriate.” This aspiration referred not only to economic resources, but also to social roles, democratic functions, human rights, and – of course – urban spaces. Syntagma Square in Greece, Puerta del Sol in Madrid, Zuccotti Park in New York, as well as some of the most iconic public locations around the world saw diverse, or even ‘irreconcilable’ in some cases crowds demand change. Within the reality of Data Capitalism and its multiple self-generated crises, people increasingly felt that they have now been totally deprived of a place (“topos” in Greek).

It is worth remembering that the coiner of “utopia,” Thomas More, chose an island as the location where he placed his ideal society. Any island constitutes a geographical formation that privileges the development of individual traits through a natural process of appropration. This encompasses both the material and the immaterial environment as expressed in the landscape, the biology of the different organisms, and – most relevant to our case – culture. Notably, when it comes to connecting utopianism with the cultural paradigm of new media art, we should not focus merely on the lack of a physical space (as articulated, for instance, through cyberspace); rather, we should address the juxtaposition of “topos” with a potentially ‘empty’ notion of “space.” The transcendence of space in a ‘digital utopia’ absolutely necessitates the existence of a ‘topos.’

‘Red Art’ can be understood as a tool for the creation of such ‘topoi.’ The lesson that new media artists can learn from the political oases catalyzed by the economic crisis is that, in order to be effective, cyberspace should become part of a strategy that combines physical and online spaces, practically and conceptually, whilst taking into account the individual traits of both. The necessity expressed through this combination constitutes (at least partly) a departure from the developing discourses around the ‘Internet of Things’ or the ‘Internet of Places.’ Alternatively, or additionally, what is proposed here is the formulation of an ‘Internet of Praxis’ (including, of course, artistic praxis). This approach is vividly reflected in several of the projects examined in this publication, as well as in the theoretical frameworks that are outlined.

Digital art is today in a position to capitalize on the participatory potentialities that have been revealed by the socio-political events that defined the early 2010s. The reconceptualization of cyberspace as a ‘cybertopos’ is a constituent part of this new ground on which people are called to stand and build. Accordingly, the emergence of a culture of ‘post-net participation’ in which digital media transcend physical space by consolidating it (instead of ‘merely’ augmenting it), may allow us to explore “concrete utopias” to a greater extent than ever before in recent times. It is by actively pursuing this objective that we would expect to change the rules of the game. Artists are often the first to try.

Bill Balaskas

REFERENCES AND NOTES

1. The term ‘post-internet art’ is attributed to artist Marisa Olson. See Gene McHugh, Post Internet (Brescia: LINK Editions), 5.
3. Gene McHugh, Post Internet, 6.
4. The etymological comparison between the terms ‘post-internet art’ and ‘postmodern art’ could also highlight this context. Notably, in the case of this juxtaposition, ‘post-internet art’ puts a tool (the Internet) in the position of a movement (Modernism). If we were to consider the Internet as a movement, then, the natural historical link that would be established through the term ‘post-internet art’ would be with net art. Nevertheless, such a decision would assign net art to a status of ‘legitimization,’ towards which major museums, curators and art fairs have shown a rather consistent hostility. In this instance, historicization becomes a foe, since it would refute a ‘neutral’ relationship of the Web with art. This perspective is closely connected with the formation of an abstract notion of universalism, to which I refer further down (see endnote 8).
5. Thomas More’s Utopia was first published in 1516, in Bologna. There are several translations of the book.
8. For more on the concept of ‘concrete utopias’ see Ernst Bloch, The Principle of Hope, tr. Neville Pluck, Stephen Place, and Paul Knight, 3 vols (Oxford: Blackwell, 1986). Bloch differentiates between ‘abstract utopias’ and ‘concrete utopias’ associating the latter with the possibility of producing real change in the present. ‘Concrete utopias’ should not be confused with seemingly similar theorizations such as Nicolas Bourriaud’s ‘microtopias,’ which structurally aim at preserving the existing status quo. Bourriaud asserts in Relational Aesthetics (2002) that “It seems more pressing to invent possible relations with our neighbours in the present than to bet on happier tomorrows.” Quite evidently, this approach stands far from the universalism that he advocates in his After Modern Manifesto (2000) as a direct result of new technologies and globalization. At a time when neoliberal capitalism was entering its worst ever crisis, Bourriaud chose to largely ignore this context and build on a concept that – in the end – is apolitical and counter-utopian. ‘Post-internet art’ appears to follow a comparably dangerous trajectory.
Suggestions for Art That Could Be Called Red

What is Red Art? Or rather: what could Red Art be in today’s post-communist, post-utopian world, a world shaken by conflicts engendered by contrary beliefs and ideologies which have little to do with communism? A world in which countries and societies are disrupted by territorial disputes, and by bloody fights about questions of religious identity, national identity, and ideology? Where communism has been overrun by capitalism with rare exception; where the European left movement is weak. Where the post-industrial era has produced an economic reality that is orders of magnitude more complex, transnational and therefore more difficult to control or change, than history has ever seen. In this situation, can there (still) be art that deals with ideas of communism constructively, or does contemporary art look at communist ideals only with nostalgia?

And let’s be clear: is art that simply speaks out against capitalism, globalisation and neo-liberalism from a leftist position – is this kind of art ‘red’ per se? Do we expect Red Art to be ‘red’ in content, for instance, in directly addressing topics such as class struggle, the negatives of capitalism and a new neo-liberal world order? And if it does, is it enough to be descriptive or do we want art to be more than that, i.e., provoking, forward-thinking or even militant? In 1970, Jean-Luc Godard drafted a 39-point manifesto Que faire? What is to be done? that contrasted the antagonistic practices of making political films and making films ‘politically.’ It called unequivocally for art that actively takes up the position of the proletarian class and that aims for nothing less than the transformation of the world. With his legacy, what kind of objectives do we request from Red Art? Do we really still think that art can change the world or is that another idea from the past that has been overwritten by something that we like to call reality? Can art that is for the most part commercialised and produced in a capitalist art market be ‘red’ at all, or does it have to reject the system established by galleries, fairs and museums in order to be truly ‘red’?

Decades ago, when artists started to use new media such as video and the computer, their works were ‘new’ in the way they were produced and distributed, and changed the relationship between artists and their collaborators as well as between the artworks and their audiences and ‘users’ respectively. Most of this new-media-based art circulated outside the ordinary market and found other distribution channels. The majority of works were inspired by a quest for the ‘new’ and consistently broke with old aesthetic principles and functions. Much of it was also driven by a search for the ‘better’, by overthrowing old hierarchies and introducing a more liberal and inclusive concept of the world, based on self-determination and active participation. Last but not least the emergence of the Internet brought us a fertile time for new and revisited utopias and artistic experiments dealing with collaboration, distribution of knowledge, shared authorship, and appropriation of technologies. Today we know that neither the Internet nor any other new technology has saved us, but that the hopes for a more democratic world and alternative economies sparked by it have come true, if only to a minor degree.

So how do artists respond to this post-communist, post-utopian condition? What can be discussed as Red Art in the recent past and present? In this issue of Leonardo we have gathered some answers to these questions in the form of papers, essays and artworks, the latter produced especially for this purpose. Bringing together and editing this issue was challenging because we decided from the start to keep the call for contributions as open as possible and to not pre-define too much. We were interested in what kind of responses our call would produce at a moment when the world is occupied with other, seemingly hotter topics, and it is fascinating to note that the resulting edition quite naturally spans decades of art production and the respective ‘new’ technologies as they related to ideas of social equality and empowerment – from video art to net art to bio art. This issue shows that the search for alternative ideas and perspectives, and an adherence to leftist ideals is neither futile nor simply nostalgic. But that this search is ever more relevant, particularly at a time when European politics is seemingly consolidating and wars around the world are establishing new regimes of social and economic inequality.

Susanne Jaschko
Why Digital Art is Red

The divide between the art shown in major museums and art fairs and that associated with the new media scene has been deep and durable. Many critics have puzzled over it, particularly because there is much that the two realms share, including the desire to put people into unusual social situations. Yet some of the reasons for the divide are plain enough, and they are about money, power and social distinction. The economic divide is across competing models of capitalist activity: the exclusive ownership of objects set against the release of reproducible symbols into networks with the ambition that they achieve maximum speed and ubiquity of circulation. The social divide is between a conservative club of super-rich collectors and patrons, and their attendant advisors, who buy their way into what they like to think of as a sophisticated cultural scene (Duchamp Land), against a realm which is closer to the mundane and more evidently compromised world of technological tools (Turing Land). Power relations are where the divide appears starkest: in one world, special individuals known as artists make exceptional objects or events, with clear boundaries that distinguish them from run-of-the-mill life; and through elite ownership and expert curation, these works are presented for the enlightenment of the rest of us. In the new media world, some artists but also collectives and other shifting and anonymous producers offer up temporary creations of a much wider conflict over the legal, political and social aspects of digital culture, and its synthesis of production and reproduction. Copyright is one arena where the clash is very clear. Think of the efforts of museums to control the circulation of images and to levy copyright charges, while at the same time surrendering to the camera-phone as they abandon the attempt to forbid photography in their galleries.

So where is Red Art and the left in this scenario? Amidst the general gloom and lassitude that has beset the borders of art are continually making cultural interventions online, and value lies not in any particular exceptional work but in the massive flow of interaction and exchange. In that world, as it never could in a gallery, the thought of the art world itself becomes more exposed to social media, and is ever less able to protect its exclusive domain and regulate the effects of its displays. So at base, the divide is economic, but at the level of what causes the repulsion from digital art – that puts collectors and critics to flight – it is deeply and intractably political.

Thirty years ago, to find out what was happening in Gaza, you would have to have had a decent short-wave radio, a fax machine, or access to those great newsstands in Times Square and North Hollywood that carried the world’s press. Not anymore. We can get a news story from [...]

In an era in which the political and artistic avant-gardes have faded, the affiliation of the art world that is founded upon the sale and display of rare and unique objects made by a few exceptional individuals – in which high prices are driven by monopoly rent effects – tends to be with the conspicuous consumption of the state and the super-rich. Here, the slightest taint of the common desktop environment is enough to kill aesthetic feeling. The affiliation of at least some of new media art is rather to the kitsch, the populist, and to the egalitarian circulation of images and words, along with discourse and interaction. New media artists who push those attachments work against some of the deepest seated elements of the art world ethos: individualism, distinction, discreteness and preservation for posterity (and long-term investment value). It should be no surprise that they are frequently and without qualification denied the status of ‘artist.’

It is also clear why the death of leftist ideas in elite discourse does not hold in new media circles, where the revival of thinking about the Left, Marxism and Communism is very evident. The borders of art are blown by putting works to explicit political use (in violation of the Kantian imperative still policed in the mainstream art world). Very large numbers of people are continually making cultural interventions online, and value lies not in any particular exceptional work but in the massive flow of interaction and exchange. In that world, as it never could in a gallery, the thought may creep in that there is nothing special about any one of us. And this may lead to the greatest scandal of all: think of the statements that artists who deal with politics in the mainstream art world are obliged to make as their ticket of admission – ‘my art has no political effect.’ They have to say it, even when it is pately absurd; and they have to say it, even as the art world itself becomes more exposed to social media, and is ever less able to protect its exclusive domain and regulate the effects of its displays. So at base, the divide is economic, but at the level of what causes the repulsion from digital art – that puts collectors and critics to flight – it is deeply and intractably political.

Artists as the New Producers of the Common (?)

by

Daphne Dragona

PHD Candidate
Department of Communication & Media Studies
National and Kapodistrian University of Athens
daphne.dragona@gmail.com

ABSTRACT

This paper examines a new form of creativity based on the commons, using as a starting point two projects commissioned by the National Museum of Contemporary Art of Athens in 2010. It aims to define the features of this emerging creativity, to locate the challenges it brings to the art world and to discuss its potentiality to influence change in a wider sociopolitical scale. It introduces artists as a new generation of commoners and it examines the role they can play not only by producing the new artificial common – which can be based on knowledge, information and affects – but, also, by introducing new ethics and values.

INTRODUCTION

According to Paolo Virno post-fordism is the era of the “communism of the capital.” This notion, which may sound as a political (pseudo-) paradox of our times, describing a capital based on communality, is not a new form of utopia however; it rather implies a new kind of accumulation and creation of value based on the expropriation, or even ‘cannibalism’ as Matteo Pasquinelli would put it, of the common. It refers to the enclosure and capitalization of knowledge, information, affects, codes and social relations that constitute today’s ‘artificial’ common wealth. Produced by the multitude and formed in the contemporary metropoleis as well as in the networked spaces of an interconnected world, the common is multitude’s strength and its Achilles’ heel at the same time. Being abundant, dynamic and diffused, it can only be understood as a derivative of a life in excess, a life open to appropriation and control. The “communism of the capital” can, therefore, be read as an oxymoron expressing certain controversies and questionings arising in relation to today’s common wealth. Can multitude’s capacities to think, to produce and exchange information and knowledge escape capitalization? How can this potentiality be reclaimed and by whom? How can a change based on this potentiality derive from within?

In the networked era, and especially in the last decade, a great number of artists in collaboration with theorists, programmers and cultural workers have started developing their work and research on the basis of the common. Providing tools, platforms and modes of collaboration, artists today are contributing to the formation of a contemporary common wealth, which points towards a new definition of the notion. The commons today are not only what we inherit from the previous generations and safeguard for the next ones to come, but also what we produce together and share; for this reason, this emerging creativity lies at the very heart of the commons. Taking into consideration the growing examples of artistic initiatives and projects being currently developed, a double-sided observation will be attempted in this paper: the focus will be not only on how forms of art encourage a shift of mentality towards the commons, but also on how the art world itself changes through this process.

The starting point for this positioning will be two projects initiated and curated by myself and organized by the National Museum of Contemporary Art of Athens in 2010, the year when Greece started losing its financial independence. Seeking for alternatives in the impasse of late capitalism, Esse, Nosse, Posse: Common Wealth for Common People and Mapping the Commons, Athens aimed to examine and locate the commons in their two main reservoirs, the internet and the city.
ESSE, NOSSÉ, POSSÉ: COMMON WEALTH FOR COMMON PEOPLE

Esse, Nosse, Posse: Common Wealth for Common People is an online platform that was launched in April 2010, as an open comment to the growing common wealth of the connected society. The title is a reference to the Latin triad “I am, I know, I can,” which having constituted the core of Renaissance’s humanism, today interestingly reappears in order to describe the features of the contemporary multitude; what is important is not only the knowledge itself but also the potentiality for its production and the formation of one’s subjectivity through it, at the same time. Taking this into account, the online platform aimed to refer, through a rich variety of artistic creation, to the motivations and capacities that form the new common wealth and to discuss the controversies and risks lying behind it. To achieve this, Esse, Nosse, Posse: Common Wealth for Common People hosted: (a) projects critically commenting on the new forms of networked wealth and (b) initiatives and open platforms based on free and open software, which encourage exchange and collaboration. Selected texts were also uploaded as resources to provide a context for further discussion.

The issues that were particularly discussed through the projects were the following: the passage from the Fordist to the post-Fordist society and the transformation of labor (First of May by Marcelo Exposito), the immeasurability of the immaterial work conducted in the networks (User Labor by Burak Arıkan and Ergin Erdogan, the new forms of online labor based on virtual sweatshops Invisible Threads by Jeff Crouse and Stephanie Rothenberg, Gold Farmers by Ge Jin aka Jingle), or on crowdsourcing (Bicycle Built for 2,000 by Aaron Kablin and Daniel Massey, re_potemkin by ←→), the necessity for a free exchange of knowledge (Free Culture Game by Molleindustria, and Perpetual Wall by Dimitris Papadatos), the interwoven character of the networked economy (All over by Samuel Bianchini), the imbalance of the information society (Internet art for poor people by Carlos Katanoftsky, and MAIGregator by Nicholas Knouf), and the value of attention economy (Falling Times by Michael Bielicky and Kamila B. Richter).

While the above works were discussing the capitalist character of the networked condition, the initiatives and platforms that were introduced invited users to join efforts of collaboration, co-production and sharing of knowledge. Different collectives with significant work towards this direction were listed with representative projects. Such cases were: the Zero Dollar Laptop by Furtherfield, which encourages people to recycle their old laptops by offering them to the homeless; the Bank of Common Knowledge by Plato-niq, which proposes a platform of exchanging services; and Mediashed’s Gearbox, which invites people to communicate their low cost products through their database. At the same time, projects with a more specific orientation and goal were also included. Such initiatives were the P2P art platform of Anders Webeng, which invites people to participate in the creation of an ephemeral common artwork based on a peer-to-peer logic, or Brett Gaylar’s Open Source cinema that invites users to upload and remix their videos online. The Artzilla team has also been included for its web browsers’ modifications and subversions that support freedom and openness, along with the Shiftspace group who, in a similar approach, propose the placement of open source layers above any website. Additionally, the Feral Trade network by Kate Rich was also presented as well as the platform of the Telecommunisten network, which offers tools and services that can be owned by the ‘workers’ themselves.

A new utopia or a breakthrough in the networked world? This body of projects is only part of an emerging creativity found on the web, which is based on the idea of the commons and is driven by the will to re-orientate users’ capabilities and disposal towards open, liberated environments. The selected works were presented as distinctive examples of a new stance that creators today take. Escaping capitalization, control and appropriation, such efforts propose to users a different mode of engagement and production in the networks. What lies behind them is a call, an urge for a new system of values that can empower the growing common wealth and can be found not only on the Internet, but also within life itself and, especially, in its most lively terrain: the contemporary metropolis.

MAPPING THE COMMONS, ATHENS

Mapping the Commons, Athens was a cartography project that followed Esse, Nosse, Posse: Common Wealth for Common People and aimed to trace the commons in the urban environment, examining their role in times of crisis. Conceptualized by the Spanish collective Hackitectura and commissioned by the National Museum of Contemporary Art in Athens, the project studied the Athenian metropolis at a particular historical conjuncture. At the end of 2010, when the project took place, six months had passed following the agreement of the first memorandum with the IMF and the EU and the implementation of the first austerity measures; it was the period that the Greek capital, confronted as the ‘beta’ city of crisis, seemed vulnerable and dynamic at the same time.

Formulated by Hackitectura and myself as a workshop, Mapping the Commons, Athens was based on the collaboration among post-graduate students and researchers from the School of Architecture of the National Technical University of Athens, the Department of Communication and Media Studies of the National and Kapodistrian University of Athens and from the field of Social and Political Sciences of Panteion University.
The works, in their wide variety, do not constitute

versity. Theorists, activists and artists with a special in-
terest in the field of the commons were also involved.
The scope of the workshop for this interdisciplinary
team was influenced by the Italian school of thought
and, especially, by the analysis of Michael Hardt and
Antonio Negri about the relationship of the commons
with the contemporary metropolis. Considering the
city as “the source of the common and the recectable
into which it flows,” a cartography of the commons for
the city of Athens was attempted in order to highlight
the city’s living dynamic and its possibility for change. Participants were therefore invited to turn to multi-
tude’s affects, languages, social relationships, knowl-
edge and interests in order to understand, locate and
emphasize commons, which to a great extent were
immaterial and abundant, fluid and unstable.

During a period of eight days, the team succeeded in
producing a documentation of the urban commons, as
part of a research online map, and a number of short
video case studies, as part of a video based cartogra-
phy depicting representative commons found in the
city. Under the four categories of natural commons,
public spaces as commons, cultural commons and digi-
tal commons, different initiatives were mapped, based
on the notions of collectivity, sociability, collaboration
and sharing. The documentation presented online
is rich and, to a great extent, reflects the emerg-
ing and vivid potentiality of the period. Some of the
most characteristic examples have been entries for
self-managed parks, digital platforms for exchange of
services and independent free wireless network pro-
viders while others focused on the fundamental com-
mons of language and memory or turned to distinctive
elements of the Athenian cityscape, such as the stray
animals and the graffiti.

The maps produced are still on view online and remain
open to further contributions to anyone interested.
Seen by their creators as databases of exchange, the
aim was – and still is – to inform the inhabitants about
spaces where communities of commoners are formed
and to empower the city’s ground for social encoun-
ters and experiences. The outcomes of the workshop
as well as the progress of the work were documented
on a blog and were also presented in the form of an
installation at the National Museum of Contemporary
Art. The most important outcome of the project how-
ever, as identified by the participants themselves, was
the realization that a new ‘common’ was produced
during the days of the workshop. And this was the
knowledge which was collectively produced by the
community of creators, students, artists and theorists,
while also building a common experience and vision.

locating the features of a commons-based art

Taking the works referenced above as examples, one
can interestingly locate similarities that assist in rec-
ognizing the features of a new form of creativity that
emerges on the basis of the commons. Although the
works are diverse and might be categorized as net art,
game art, software art or as documentaries, interven-
tions, databases and maps, at the same time, they all
share a kind of openness and collectiveness that op-
poses previous ways of perception and evaluation in
the contemporary art or new media art scene.

In an attempt to locate and summarize some of the
main features of this creativity, the following points
could be mentioned as a start:

» The works, in their wide variety, do not constitute
art objects or art installations; they present no
certain ‘aura’ and claim no art market value.
» They, accordingly, do not aim for the awe of the
spectator; they do not impress with their aesthet-
ic, techniques or complexity.
» They claim no authorship and no uniqueness; their
power is in their distribution and diffusion.
» They aim to be direct, understandable and reach-
able.
» They address the citizens and users of the cities
and the networks and not specifically the art audi-
ence, the art institutions or the art collectors.
» They develop, use and share tools of an open and
free culture.
» They are works that, as Ruth Catlow and Marc
Garrett have put it, are led by artistic sensibilities
that might incorporate utilitarian or theoretical
concerns, but are not governed by them.

The aim of this growing entity of works ultimately
seems to be no other than to socialize knowledge.
They are works that, as Pasquineilli expressed it,
belong to the age of “social reproducibility,” as
which follows Benjamin’s age of “mechanical reproduc-
tion;” but goes beyond the unlimited reproduction
of artistic objects and the loss of the aura of the
prototype. Therefore, the challenge for the works of
art now seems to be a new one: it is the challenge for
a “unicity without aura,” as Virno put it, a “non-original
unicity,” that is, “which originates in the anonymous
and impersonal character of the technical reproduc-
tion.” Art’s new aim, as he explains, is no other but to
find the relation between “the highest possible degree
of communality or generality and the highest possible
degree of singularity, the balance between the most
general and the most particular.” Works such as
the ones mentioned seem to take a step towards this
direction as they refer to the common wealth pro-
duced by the general intellect of the many, on the one
hand, and underline the importance of the contribu-
tion of each singularity, on the other. They are works
that overcome art’s ‘artness,’ uniqueness and non-
utility, while opening up to spaces of communication,
exchange and critical autonomy, in an attempt to find
a new balance between collectivity and individuality.

This realization, however, leads to the need for a sec-
ond definition: who are the creators that seek this new
balance expressed as a ‘unicity without aura’ for their
works and why?

identifying the creators of commons-based art as the new commoners

When discussing works based on collectivity, open-
ness and lack of authorship, it readily becomes clear
that we mostly refer to creators who are leaving
the role of the ‘artist’ and move towards the one of
the initiator, the collaborator, the affective worker,
the networked creator, or the hackivist. Often, the
creators might not even be artists. They are program-
mers, architects, lawyers, social scientists or generally
people from different fields who see creativity as an
At this point, it is important to recall some of the fundamental ideas of common wealth, on the one hand, and analyze the actions of the creators being discussed, on the other. “There is no commons without commoning” Peter Linebaugh wrote, highlighting the fact that besides the common goods, the social practices of a community are also needed. There are no commons without the commoners; these are the individuals who not only produce and share the commons, but also establish relationships of solidarity between them and fight in order to reclaim the commons that have been enclosed. While Linebaugh refers to the Magna Carta, the commoners of the medieval England and the land enclosures, one could, interestingly, juxtapose this sequence to the inhabitants of today’s cities and networks with the enclosure of the common wealth produced. This point is also highlighted by Hardt and Negri in their Declaration, where they specifically discuss the notion of the commoner in the past and the present:  

The commoner is thus an ordinary person who accomplishes an extraordinary task: opening private property to the access and enjoyment of all; transforming public property controlled by state authority into the common; and in each case discovering mechanisms to manage, develop, and sustain common wealth through democratic participation.  

And if the task of the commoner in the past was to provide access to the natural resources for all, then today as they explain, this task is being transformed to creating “a means for the free exchange of ideas, images, codes, music and information.”  

The making of the common is, therefore, a process with an affective character and, as it will be argued in this last part of the paper, it is exactly what lies behind the aforementioned works and connects them. In this respect, artists may be considered as the new commoners who, through their actions and initiatives, turn to users’ and citizens’ potentials in order to empower them and shape new forms of communities based on the ideas of understanding, collaborating and sharing.  

The following acts of ‘commoning’ could be mentioned in support of this argument:  

a. The formation of new common spaces.  

Either online or in the urban environment, the territories that the artists create are new spaces of social encounters. The online collaborative platforms, the databases of exchange as well as the workshops and the events being organized aim at offering to users and inhabitants spaces beyond exploitation and control. In an era of an increasing capitalization for both the public and the online space, they constitute counter-proposals for spaces where initiatives can be freely taken and actions can be collectively planned following solely the participants’ needs and desires.  

b. The provision and empowerment of tools.  

Creators assist users and citizens today by encouraging the use of the tools that they already have in their possession. These tools respond to the need to learn to work with language, codes, ideas and affects, while escaping the appropriation of these elements by third parties on the web and in the city environment. As Holmes notes, “artists, writers, actors, painters, audio-visual producers, designers, musicians, philosophers, architects, all have had to find ways to refuse to let their subjectivity become the mere medium of capital flows; a stepping-stone between money and more money.”  

This ‘affectivism’ of art, as Holmes names it, connects art to activism and affects and is needed to empower multitude’s creativity and resistance.  

c. The emergence of a new ethos.  

For the production of the common, a leap is required “from the individual to the collective;” as Hardt and Negri mention. “Being with” is no longer enough; a “doing with” is necessary, which can spread and teach people how to make decisions. This “doing with” lies behind most initiatives taken by creators working on the commons today, with projects that are based on open processes of collaboration and sharing. Catlow and Garrett have specifically called this new logic as the new ethos of ‘DIWO’ (Do it with others), which refers to the goal “of a free society without economic classes, where people produce and share as equals, a society with no property and no state, that produces not for profit, but for social value.”  

Utopian while they might seem, the aforementioned actions that are based on the commons do aim to build the ground for radical social and political changes. New tactics and strategies can be found through users’ and citizens’ participation in these creative and technical processes. Possibly, in this way, and as Baudrillard claims, a new transnational culture can be born with communities based on a different set of values and on a discourse, which — starting from the commons — will respond to the urge for sustainability and solidarity.  

**RECLAIMING A NEW FORM OF ‘EXODUS’**  

Open, participatory and rhizomatic, the new form of art emerging based on the commons seems to have
